

# AIRSHIP VSAAS

## CLOUD AND HYBRID SERVER ALTERNATIVES

Airship VMS offers flexible cloud solutions for expanding surveillance networks, allowing its users to centrally manage servers, cameras, components and users from secure devices anywhere. Adding new locations has never been simpler with our privately hosted cloud solution, Argus.

Argus utilizes on-site cameras, operating from a secure cloud network managed by IT professionals. Whether you have a single location and would like to save on hardware, or you would like to expand remote sites at a moment's notice with minimum IT resources, Airship VMS is prepared to meet the exact needs of your project.

### ON-SITE

Trusted by Fortune 100 companies and government agencies, Airship's Enterprise Management System (EMS) securely connects to any number of Airship Servers, locally or remotely. Users monitoring from Nexus Client are verified with EMS prior to login.

### HYBRID

With EMS installed on-site, some recording and streaming components like Outpost can be added to the cloud without installing hardware for an instant virtual server. On-site hardware can always expand, and other network connected servers may be added.

### CLOUD

With Outpost operating from the cloud, remote IP cameras and other devices can be added as needed without installing on-site hardware. While low-resolution video streams back to the recording servers, high-definition video is readily available for download.

# WHAT WE OFFER:

## AIRSHIP EMS & SERVER

- ✓ Enterprise Management of Video, Sensors, Radios, Radars and More
- ✓ Scales from Ten to Tens-of-Thousands of Cameras and Sensors
- ✓ Connect Argus VSaaS sites to Airship VMS Seamlessly
- ✓ Provides Audit Log Reports for All Primary Activities on System
- ✓ Record Video, Audio and Metadata for Permission-Based Distribution
- ✓ Eliminate the Need to Train New Operators with Remote Installation

## VIEWING CLIENT OPTIONS:

### NEXUS CLIENT

- ✓ Full Featured Command and Control Application

### NEXUS VIDEO PORTAL

- ✓ Thin Client for Remote Web-Based System Access

### NEXUS MOBILE CLIENT

- ✓ Runs on iOS and Android Based Handheld Devices

## OUTPOST

Outpost can be installed on-site to store high-resolution video, or IP cameras can stream video back to Outpost installed in the cloud (Argus). Not only are streaming resolutions adjustable, but high-resolution video can also be downloaded while using Nexus Client.

## COMPLETE SOLUTION

Airship provides a complete solution to scale hardware and software as needed. Airship EMS has natively integrated with third-party engines for facial recognition, license plate recognition, mesh radio networks, drone control, access control features and more. EMS integrates with an array of cameras and other leading-edge audio/video image transmission devices to support our clients where they are with current and future needs in mind. **Airship** works in lockstep with our clients to ensure integration on every site is seamless.
