

## SCRAM Remote Breath®

SCRAM Remote Breath is a handheld, wireless breath alcohol monitoring device with Automated Facial Intelligence™ (AFI) that provides a GPS location with both taken and missed tests. AFI is the same facial recognition system used internationally by government security forces. It scans and automatically matches the photo of the person taking the test with a baseline photo taken at enrollment.

SCRAM REMOTE BREATH®	
Dimensions	3.5W × 7.0H × 1.75D inches
Weight	14.0 ounces
FCC ID	P8M-AMSCGJMW1
Memory	≥ 30 days
Battery Type	Rechargeable Lithium Ion
Battery Life	72 hours
Battery Charging	6 hours to fully charge

- **Ethernet connectivity** – even if a cellular connection is unavailable, officers can perform installs and offenders can transmit test results
- **Automated Facial Intelligence** – the same facial recognition system used internationally by government security forces
- **Best camera resolution** and picture quality in the alcohol testing industry
- **Device-initiated testing** – automatically turns on and prompts offenders for scheduled and on-demand tests
- **Immediate notification** of both BrAC and positive offender ID
- **Store & Forward** – never miss a test
- **GPS location** with both taken and missed tests
- **Rugged** – built for corrections

## Key Features

### Rugged and Portable

A rugged, handheld, and easy-to-use device built for corrections - not the general public. It has been subjected to rigorous drop testing and meets military standards.

### Automated Facial Intelligence (AFI™)

Ensures correct person is taking the test, while reducing manual review of photos. Automated matching reduces manual review by up to 95%, saving a significant amount of staff time.

### GPS location with every test – even missed tests

The device provides a GPS location with every test – both taken and missed. A GPS location with a missed test can help an officer make an informed decision as to why a participant skipped a test.

### Store and Forward

Stores up to 48,000 test results even when out of cell coverage and forwards the time-stamped results as soon as coverage is regained. Store and Forward also ensures a test prompt is never missed when out of cell coverage.

### Flexible testing and test reminders

The system offers random, scheduled, and on-demand tests. Device-initiated testing and optional reminder notifications sent to participant's cell phone improve compliance.

### Real-time Notifications

Alcohol testing results are reported immediately after each test via email or text. The AFI photo verification alerts the officer if someone besides the participant is taking the test.
