

Cal/Amp®

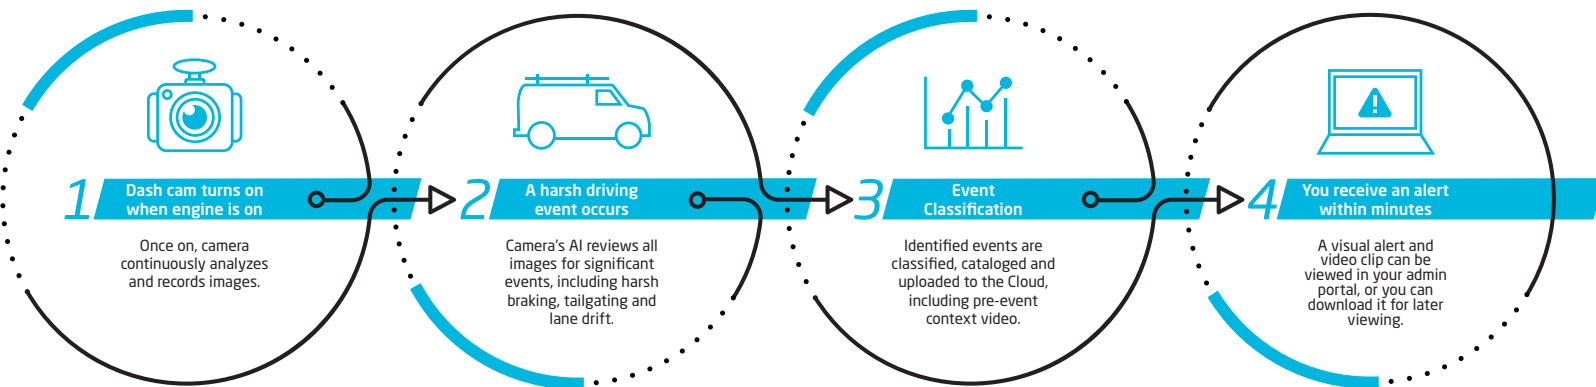

iOn™ Vision

Transform the way you see your fleet.

CalAmp iOn™ Vision is a fully integrated video telematics platform that provides actionable video intelligence to boost driver safety, proactively protect fleets and help mitigate potential legal liabilities stemming from roadway accidents and incidents.

The solution features an easy-install camera along with a CalAmp Wi-Fi-enabled telematics edge device and video server empowering fleet managers to improve their fleet safety and mitigate potential liabilities.

Delivering Value For Your Business

Give the "Full Picture"

Provide value and actionable video insights for your customer through visual, inertial and CrashBoxx video triggers

Seamless Integration

Have the ability to add our iOn Vision service directly into your own application(s) with our integrated and secure APIs and webhooks

Drive Exponential Value

iOn Vision service can be customized and programmed to meet your customer's needs

How iOn Vision Helps Fleet Managers

Help Protect Your Fleet And Drivers: Context is important for harsh driving events. When unsafe driving behavior occurs, you can view the dash cam video to better understand what happened before and after and provide video evidence in the event of a false claim.

Improve Driver Safety: Reward the Best, Coach the Rest As an added driver safety option, CalAmp's Driver Behavior Scorecard can be added at additional cost to permit maximum driver development, coaching and training. It produces a comprehensive driver scoring report card based on patented algorithms designed to identify the need for training, help minimize vehicle wear and tear, and provides detailed incident reports on risky driving behaviors, while also improving road safety.

Get the "Full View" With CrashBoxx™: Watch relevant video clips within minutes of an unsafe driving incident. Leverage visual, inertial and CrashBoxx triggered video clips so you can focus on the essential pieces of data, without weeding through endless hours of footage, and help your drivers become safer and more efficient.

Helps Mitigate Frivolous and Fraudulent Claims: At no additional cost is CalAmp's award-winning CrashBoxx, a vehicle risk management service that provides alerts in near real-time when a driver is involved in a collision; reconstructs the collision with accurate situational details to facilitate investigations; speeds insurance processing and helps mitigate frivolous lawsuits or fraudulent claims by other motorists.

Key Features:

- Wireless Connectivity (Camera to LMU) | One Data Plan Per Vehicle | Visual, Inertial and Crashboxx Triggered Video Clips
- Cloud-Hosted Video Clips (Pre-& Post-Event) | Secured API/Webhook Integration Available
- Part Of The Calamp Telematics Ecosystem; Can Integrate with CalAmp iOn

The Value of CrashBoxx

CrashBoxx, our award-winning vehicle risk management system, gives fleet managers a comprehensive analysis of an accident within minutes of the event. As part of iOn Vision service, fleet managers now can leverage visual, inertial and CrashBoxx triggered video clips into actionable intelligence.

CrashBoxx Highlights:

- Provides detailed crash data for accident reconstruction | Automates incident reports | Facilitates validation and investigation services
- Streamlines the claims process | 96% system reliability | 99% crash algorithm reliability
