## **Installation of VuLink with an In-Vehicle Camera System or Installation of VuLink as a Standalone System or Add-On System**

Digital Ally can provide all of the necessary equipment that will be required for installation. The VuLink patented automatic activation device and optional Sync Cable will include the necessary cables needed for installation. If extra, extension cables are purchased, they will also be installed in the vehicle.

Digital Ally has an in-house Installation Team that can install the VuLink device on-site and can also train your personnel on how to install the systems. Digital Ally requests that all installations be scheduled thirty (30) days in advance. Once the installation has been scheduled, Digital Ally will coordinate with you to gather all of the necessary information needed to ensure a smooth installation process.

The Digital Ally Installers will arrive on-site with their own tools and will begin the installation process until the project is complete. After the equipment is installed, the Installers will test the system to ensure that it is working according to standard before moving on to the next vehicle. Once the Installers have completed the installations, Digital Ally will supply documentation that will summarize everything that was done to ensure that work was completed to your satisfaction.
