Installation of Two-Camera System or Four-Camera System and Removal of Existing Camera System

Digital Ally can provide all of the necessary equipment that will be required for installation. The In-Vehicle Camera Kit will include the necessary hardware as well as the necessary cables and mounting assembly needed for installation. If additional extension cables and/or cameras are purchased, they will also be installed.

Digital Ally has an in-house Installation Team that can install the camera systems on-site and can also train your personnel on how to install the systems. Digital Ally requests that all installations be scheduled thirty (30) days in advance. We can also provide removal service for existing camera systems. Once the installation and/or removal service has been scheduled, Digital Ally will coordinate with you to gather all of the necessary information needed to ensure a smooth installation process.

The Digital Ally Installers will arrive on-site with their own tools and will begin the installation process until the project is complete. After the equipment is installed, the Installers will test the system to ensure that it is working according to standard before moving on to the next vehicle. Once the Installers have completed the installations, Digital Ally will supply documentation that will summarize everything that was done to ensure that work was completed to your satisfaction.
