

RFID Asset Management and Tracking

- Smart inventory of all items in stock.
- Updates can be automatic (multiple times per second).
- Missing equipment can be tracked to the last place it was on the truck.
- Medications and other date-sensitive items can be highlighted for use as they near their expiration.

Product Description

The Silent Partner Technologies IntelliView™ is a comprehensive solution designed for enterprises seeking to track their assets from end to end, in real-time or batch. When we talk about this application the first and the foremost thing is it resides in the cloud, this means there is no added expenses of PC / messy cds or updates the client has to be concerned about. The data can be accessed from anywhere in the world, providing you have an internet connection even if it's a phone meaning there is real-time asset tracking.

The asset management software also includes an inventory and service application where as a client you can track what services were performed on a specific asset and what inventory has been so far consumed on a certain service making it a totally integrated solution. Here we use both active and passive RFID technology so you will be as true experts where you will know where your specific asset is in a blink of an eye.

The clients get many views of their data such as maps, an elegant dashboard, or traditional text-based views. Another interesting feature is the Alerts engine that provides various alerts based on real-time hardware triggers so that the user gets an alert as and when a product is coming up for calibration. We recommend our clients the rfid asset management software as whenever an asset or a person has walked into an area where they are not allowed, it will send an alert letting the administrator know of that event in real-time.

Lastly, the IntelliView™ includes a report writer where anyone can create a custom report without the need of an IT person or someone from Silent Partner Technologies.

RFID Asset Management Software with IntelliView™

- Web Based
- Android Compatible
- Mapping Capabilities
- Real Time Location System (RTLS)
- Includes Asset Management, Inventory Management and Service
- Bar Code, Passive and Active RFID Support
