

## HOSTED VISCE®

Hosted VISCE® Back Office is a centralized ALPR database and set of tools that provide the backbone communications platform to store and process your ALPR hotlists and data in a secure Government Cloud environment. Quickly deploy ALPR with all of the features of a traditional on-site back office database server, without the associated management and added costs of a physical server.

## Benefits

- Stores data securely in the Government Cloud for easy management and instant review of information
- Minimal management requirements in a secure, government certified, high-availability cloud environment
- You own the data and decide who can access it.
- Advanced search capabilities and analytic reporting, such as Convoy, Loop and Time Analysis.
- Capable of storing custom, local, state and national databases.
- Real-time access and alerting for mission critical applications.
- Always be on the latest version of VISCE® with the most up to date feature sets and search tools available.
