

National Public Safety Group

Consulting Services

Specializing in Public Safety Software

What makes us different than other consulting firms? We have a different approach. We use different tools. We have a different mission. From our implementation case studies and our NPSG rating that we have implemented to grade company/agency implementations, we have an intense focus on public safety software. We aren't doing radio projects or building police departments. We are studying, researching and doing everything possible to know the software providers better than anyone. We have software specialists who implemented and trained public safety software for many years. We have companies demo to **our** team so we can know who is making the most strides in new technology. By not focusing on so many other consulting needs, we are constantly improving our primary consulting focus to achieve our mission and to achieve our goal – ***We strive to be the number one public safety software consulting firm in America.***

Public Safety Software Consulting

- Needs Assessment
- Selection process
- Procurement
- RFI / RFP (If needed)
- Project Management
- Ongoing maintenance
- Training

What makes us different?

- Our Public Safety Software Matrix, which provides our NPSG Rating for software vendors
- Our individual Case Studies on implementations, which provides best practice methods and lessons learned from the vendor AND agency side
- Software specialists on our implementation teams, who have implemented and trained software for many years

Serving those who serve
